

Stainless Steel Crash Rail

Model CR55-SV

Stainless steel crash rail provides maximum impact resistance with a clean, sleek look. Our crash rail is made of 16 gauge, type 304 stainless steel with directional #4 satin finish. Installation is easy – crash rail lengths hang on included mounting brackets which attach with screws to wall. Tightening the hidden set screws locks the rails in place. Ends are finished with matching stainless steel plate. Crash rail is available smooth face or with “V” accent.

About Alpar Architectural Products

Alpar Architectural is a manufacturer of wall protection for use in healthcare, commercial and institutional buildings. All of our products are PVC-free and made from recycled and rapidly renewable materials, including deTerra™ biobased polymer, aluminum and stainless steel. Call for a catalog or visit our website to see our full line of handrails, crash rails, corner guards and sheet wall protection.
